

Press Release 5/2010

Libelle presents new solutions at SAP® TechEd 2010

Automated Time-saving Libelle System Copy Technology for Use With SAP Solutions

Stuttgart, September 23, 2010 – Libelle AG, the specialist for high-availability, disaster-recovery and data-protection solutions with coverage for logical and hardware outages, will present its new solution, Libelle System Copy, at the SAP® TechEd 2010 conference being held in Berlin, October 12-14, and in Las Vegas, October 18-22. Additionally, Libelle AG will demonstrate its newly released front-end graphical user interface (GUI) and solution portfolio, which mirrors SAP application landscapes locally and across large distances with a built-in time delay.

“We will provide first hands-on presentation of Libelle System Copy at SAP TechEd 2010,” said Lars Albrecht, CEO of Libelle AG. “The highly qualified audience of SAP customers and partners, as well as opinion leaders, press and analysts will have the opportunity to witness the launch of the automated Libelle System Copy solution for use with SAP applications. Conference attendees will also have the chance to learn about our established portfolio of high-availability, disaster-recovery, and data-protection solutions for software and/or user errors, hardware failures, and site outages.”

Libelle System Copy 1.2 has also achieved certified integration with the SAP NetWeaver® technology platform. It is designed to support system administrators with a pre-configured, pre-defined and end-to-end process for system copy procedures related to SAP solutions. This automated process includes planning of system copies, system settings, setting job status, backup of tables, file systems, license information and access control lists.

The SAP Integration and Certification Center (SAP ICC) has certified that Libelle System Copy 1.2 integrates with SAP NetWeaver 7.0 via the

external interface for change and transport systems (BC-CTS) 4.6 integration scenario to exchange critical data with instances of SAP Business Suite software.

“Libelle System Copy, when used together with SAP solutions, allows users to automate the creation of full system copies of multiple productive instances without extensive planning, with just minimum preparation, and sustained quality of service,” said Ralf Baumann, sales director, Libelle AG. “Customers can deploy Libelle System Copy with existing technologies like snapshot solutions of various storage system vendors.”

In addition to Libelle System Copy, Libelle will also present its new GUI for the following solutions: Libelle BusinessShadow®, Libelle DBShadow®, Libelle FSShadow® and Libelle SwitchApplication. The new GUI offers a familiar look and feel within current system environments and improves the ease of use of all Libelle solutions beyond the usability standards defined by Libelle’s previous GUI.

Libelle System Copy is scheduled to be available in the fourth quarter of 2010. With different license options, users can purchase and implement Libelle System Copy in a flexible, cost-effective way.
